

## Contribution of Environmental Conservation and its management for Prosperous Country

Mr. Himanshu Dixit  
Assistant Professor

Shri Krishna University, Chhatarpur M.P.

### ABSTRACT

In this research paper, the study is completed in order to how the conservation and of environment is essential for the prosperity of our nation. Forest Conservation, soil Conservation, water conservation. Grass Lands conservation and mineral conservation are the back bone of this! wild life conservation also plays important role. In this any country can not be prosperous without all these factors. It is our duty to conserve all these natural objects to make the contribution in the progress of our country.

### KEY WORDS

Conservation, Environment, Contribution, Essential.

### INTRODUCTION

The real meaning of conservation is to protect the . Components of Environment. The Management and conservation of Environment is very essential for our safe and prosperous India. Not only the management and conservation of Environment is essential for the development and prosperity of our country but also this is much essential for human beings and it's sustainability. If the environment will not be conserved, the activities of human will be effected. It is evident that it will leave impact on human nature as well it is our moral duty to conserve coal, water and electricity. in the comparison of all The conservation of coal is much important because it's storage is limited and it can not be increased how electricity and water are iternal.

On the other hand it is also much important to conserve the role resources. Because these are not easily available. If these resources are not preserved. The life of humans and animals. will be full of difficulty. And thus it is clear that there is great role of environmental conservation and it's management in order to make any country prosperous.

### MINERAL CONSERVATION

Minerals are the precious gift of nature. It takes millions of years to get its form and it's storage is decreasing day-by-day, by it's excessive use few factors are significant to cease the excessive use of minerals. These are given following -

1. Advance technology of mining
2. Control on excessive exportation
3. Illegal excavation of minerals

## **WATER CONSERVATION**

Water is base of life on this universe. Not a single country can progress without water conservation water conservation is the back bone of economy development of every country. the concept of connection of rivers form one to another is the mile stone of former priminister late shri Atal bihari Bajpai's Government. it is much important to save the rain fall water to construct the pools, wells dams.

## **FOREST CONSERVATION**

Forests are not only significant for good nature but also development of any country Forests are. the factor which plays significant role in rain. We can not imagine our country leading on the path of development without water conservation.

## **ENERGY CONSERVATION**

Energy conservation is the main factor of development of any nation without energy conservation, development of any nation can not be imagined. If we look into the presents scenario of the world the country, which has ample energy conservation that is much powerful, Prosperous and developed in present time. Government is trying it's level best to conserve the Energy because this is big challenges for upcoming generation. Government is implementing the advance technology of solar energy, biogas, wind Energy to conserve the Energy for our development and for the betterment of most generation.

## **SOIL CONSERVATION**

India is agriculture based country and it is much important for good farming and good productivity that our soil of field must be fertile for this it is significant that we should be cautious about the soil pollution and it's prevention. Government should provides pesticides and chemical fertilizers but it's utilization must be in a balanced form. If Soil conservation be fussed by the Government of any nation, that is the next step on path of development.

## **CONCLUSION**

On the bases of above description it is clear, that the environmental conservation and it's management is much important to make our country developed and progressed, the conservation of forest. Soil conservation mineral conservation water conservation play very significant role in economical development of our nation.
